<u>Cash - short-term net investments/(borrowing) balances:</u>

Commentary on Cash Movements during the year:

The summary on the previous page provides a comparison of the actual cash receipts and payments compared to the forecasted cash receipts and payments.

During the first 5 months of the year, the Council's net cashflow has resulted in fluctuations in short-term net investment/borrowing balances. However, overall temporary borrowing has reduced due to the accelerated receipt of grant income in the first three months of the year. The Council uses temporary borrowing to finance prudentially funded capital expenditure. While temporary investment rates and temporary borrowing rates are low the treasury team will delay taking any new long-term borrowing to fund planned capital expenditure. The interest charged by Lancashire County Council on the Local Government Reorganisation Debt is lower than anticipated. As a result, the delay in taking new long-term borrowing and the lower interest charge from Lancashire County Council mean that a favourable credit variance is once again forecast for 2015/16.

The chart of actual and forecast month-end balances shows temporary investment and borrowing levels throughout the year. The forecast shows the level of borrowing that may be required to cover planned capital expenditure up to 31st March 2016.
